

# DOLL® Zero Emission

# LIFT OFF TO ZERO

Start improving your global footprint. Reduce your total cost of ownership. Anticipate the future today. And choose DOLL® zero emission – the emission free catering truck solution that is going to revolutionize the business.

For you a DOLL® zero emission vehicle works just like your regular catering truck, unlike the superstructure and refrigeration unit are 100 % electrical driven. A fast charging high-performance battery pack keeps your cooling unit

running and feeds all the hydraulic functions - including the scissor. To extend the autonomy on the tarmac and to produce your own energy during operation to optionally available solar panels are integrated into the body roof.

## Features and benefits

- **100 % emission free catering process**
- **ROI in only 3,5 years**
- **Lifetime\* savings of up to 110.000 € compared to an ordinary catering truck**
- **349 tons of CO2 savings with every vehicle for the entire lifetime\***
- **Up to 11 aircraft operations with a fully charged battery**

The values have been calculated for a two shift daily operation for the climatic conditions in central Europe or the US.

\*Lifetime = 15 years
